

### THE DJA RESERVE

Ticking the correct answer turns the field green, ticking the wrong answer turns it red.

**1. Prague Zoo has been involved in nature conservation in the Dja Biosphere Reserve for a long time. Where is this protected area, from which the pavilion in Prague Zoo takes its name, located?**

- a) In Cameroon, Africa.
- b) On the Indonesian island of Sumatra.
- c) On the African island of Madagascar.

**2. Prague Zoo contributes to the conservation of gorillas and other endangered species of rainforest animals in the Dja Reserve through a project called:**

- a) The Unruly Bus
- b) The Wandering Bus
- c) The Lost Bus

**3. Lowland gorillas are a critically endangered species. The main cause of their population decline is:**

- a) felling of rainforest and poaching.
- b) drought and the associated loss of water and food resources.
- c) epidemics of malaria and yellow fever.

**4. In the Dja Reserve, a group of mantled guerezas share the exhibit with the breeding troop of lowland gorillas. Which of the following statements about these primates is not true?**

- a) Mantled guerezas' main food in the wild is young leaves and shoots.
- b) Mantled guereza young are born with white fur and do not acquire their black and white colour until later.
- c) The tail of the mantled guereza is prehensile, and they use it as a fifth limb.

**5. De Brazza's monkeys live hidden in dense tropical forests near rivers and swampy areas. When threatened, these primates usually:**

- a) run into the water, where they dive below the surface to escape the predator's sight.
- b) give a loud, warning cry, and run up into the treetops.
- c) become immobile, tucking away their distinctively coloured heads and trying to blend in with their surroundings.

### THE DJA RESERVE

Ticking the correct answer turns the field green, ticking the wrong answer turns it red.

**6. Northern talapoins, which share an exhibition in the Dja Reserve pavilion with African brush-tailed porcupines, are a species that is:**

- a) the largest rodent in Asia.
- b) the smallest African monkey.
- c) the smallest songbird in Africa.

**7. Gambian pouched rats, which are used for detecting mines due to their excellent sense of smell, are also called:**

- a) dograts, due to a sense of smell comparable to that of tracking dogs.
- b) African giant rats, due to their large size, growing to about 0.9 m long.
- c) votsotsy, which is the native name for them meaning “mine hunters”.

**8. In the wild the straw-coloured fruit bat eats:**

- a) a variety of flying insects.
- b) fruits, flowers and young leaves.
- c) smaller vertebrates.
